

Janoschka produces embossing rollers in a wide range of commonly used manufacturing processes as well as creasing rollers. HSC-milled union rollers with extremely accurate concentricity and production within  $\mu$ -tolerance ranges are part of the product line. As special service we offer test and sample embossing on original materials.

Our tools are used for high-quality packaging of well-known products in the tobacco and food industry and for other industrial applications, such as tissue or textile. Our enthusiasm and spirit of innovation are the driving force behind the continuous development of embossing applications.

## Production Technologies

	Diameter	Face length	Total length
<b>Direct laser engraving</b>	max. 445 mm	max. 2200 mm	max. 2900 mm
<b>Milling</b>	100 – 350 mm	100 – 1700 mm	100 – 2200 mm
<b>Laser etching</b>	max. 500 mm	max. 3600 mm	max. 3800 mm
<b>CO<sub>2</sub>-Laser</b>	50 – 500 mm	max. 2800 mm	max. 4000 mm

Material	Cylinder design
Copper, aluminium, steel, brass, silicone, EPDM, other synthetic materials	Solid body cylinder, sleeve, segmental cylinder
