

In addition to rotogravure printing, flexo printing is one of the most significant print processes for today's packaging printing. Applications range from flexible packaging on a roll to sheet fed printing for cardboard.

As a full service provider, Janoschka offers a complete product range: from elastomer printing formes for continuous printing to laser imaging on polymer printing plates and sleeves for high quality prints. Of course, screen and print substrate simulation when preparing the proof is part of the quality standard of Janoschka to ensure best possible colour reliability when printing.

Elastomer

	Technology	Screen	Width	Circumference	Format	Thickness
Sleeve / rollers	laser direct engraving	up to 60 l / cm	up to 3500 mm	157 – 1570 mm	–	–

Photopolymer

	Technology	Screen	Width	Circumference	Format	Thickness
Plate Digital	digital (HD + nyloflex® NExT technology)	up to 70 l / cm	–	–	1270 x 2030 mm	1,14 – 6,35 mm
Plate FAST	digital	up to 70 l / cm	–	–	–	1,14 – 2,84 mm
Plate Kodak Flexcel NX	digital	up to 70 l / cm	–	–	810 x 1067 mm	1,14 – 2,84 mm
Sleeve	digital	up to 70 l / cm	up to 1750 mm	260 – 1400 mm	–	–

Lacquer Plate

(in register for finishing in offset printing)

	Technology	Screen	Format	Thickness
Plate	analog / digital	up to 60 l/cm FM screen	up to 7B format	1,16 mm

Custom-tailored solutions are available any time. Please contact us for additional information.

Mounting on Carrier Foil

Mounting width with press proof option
3200 mm

Custom-tailored solutions are available any time. Please contact us for additional information.

We manufacture for you in Germany, Portugal and Argentina.
