Your Benefits

janoschka

Our source of inspiration always starts with real materials: wood, stone, textile or any other creative design. With the combination of your ideas and our experience, we can develop your individual design by creating 3D effects. By digitizing your specific material with different scanning methods, using different lighting combinations, we create faithful and vivid reproductions of even the finest textures or details. To upgrade your design, we also provide special reproductions for tactile, matt, soft or glossy effects either for covering the whole product or as part of a synchronized structure.

Drawing on our extensive experience of the market, we provide on-site printing support and individual consulting. We can recommend the latest technologies to help you achieve the best results with your production processes, allowing you to react quickly to the continuously changing market you face.

Applications

- Pharmaceuticals, cosmetics, tobacco, decor, chemistry packaging, interiors, automotive, luxury
- Aluminum foil, cardboard, foldable boxes, plastics
- Mock-ups
(scale models or digital models)

Methods & Processes

- Consulting, feasibility studies
