A new cylinder concept for rotogravure printing

janoschka

The average run-length in flexible packaging printing has been declining over the past years and continues to do so.

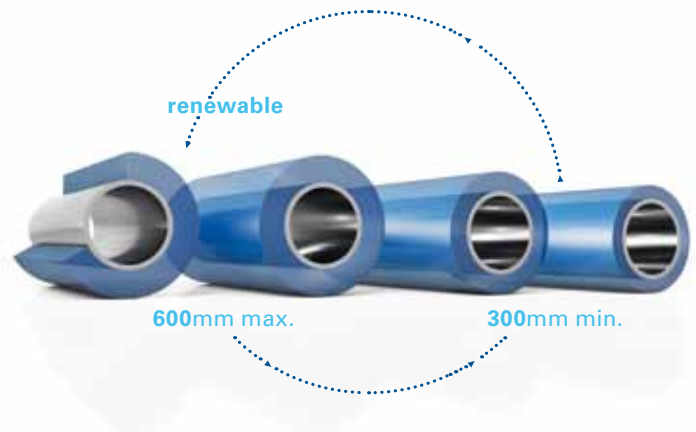

Although gravure printing is often facing an old-fashion and cost-expensive reputation, most brand owners prefer gravure printing because of its outstanding quality, consistency and brilliance of color.

Concept

Janoschka is developing a revolutionary concept for ultra-short and profitable print runs in flexible packaging printing.

The Dynacyl concept, being extremely fast, light and affordable, will provide printing tools on a rental basis.

Tool and concept are still being developed.

Your Benefits

- Ultra-short and efficient print run
- Easy handling and logistics
- Cost cutting by: reducing storage place, set-up time, waste, production cost, delivery time
- Additional capacities
- Reduced investment and fix assets

Applications

- Packaging (FMCG, food and non-food, Tobacco)
- All substrates
- All ink systems
- Metallic, gloss or matt varnishes
- All engraving technologies

Our Offering

- A fast, light and affordable cylinder concept
- A standard product (unique in the industry) for ultra-short print runs
- Variable in circumference from 300 mm – 600 mm
- Light weight cylinder from 9 kg to 25 kg max
- Completely re-usable and recyclable material
